## Introduction to the Parent Guide

Welcome to the *Algebra 2 Connections Parent Guide with Extra Practice*. The purpose of this guide is to assist you should your child need help with homework or the ideas in the course. We believe all students can be successful in mathematics as long as they are willing to work and ask for help when they need it. We encourage you to contact your child's teacher if your student has additional questions that this guide or other resources do not answer. **Assistance with most homework problems is available at [www.hotmath.com](http://www.hotmath.com).**

This guide was written to address the major topics in each chapter of the textbook. Each section of the Parent Guide begins with a title bar and the section(s) of the book that it addresses. In many cases the explanation box at the beginning of the section refers you to one or more Math Notes boxes in the student text for additional information about the fundamentals of the idea. Detailed examples follow a summary of the concept or skill and include complete solutions. The examples are similar to the work your child has done in class. Additional problems, with answers, are provided for your child to practice.

There will be some topics that your child understands quickly and some concepts that may take longer to master. The big ideas of the course take time to learn. This means that students are not necessarily expected to master a concept when it is first introduced. When a topic is first introduced in the textbook, there will be several problems to do for practice. Subsequent lessons and homework assignments will continue to practice the concept or skill over weeks and months so that mastery will develop over time.

Practice and discussion are required to understand mathematics. When your child comes to you with a question about a homework problem, often you may simply need to ask your child to read the problem and then ask her/him what the problem is asking. Reading the problem aloud is often more effective than reading it silently. When you are working problems together, have your child talk about the problems. Then have your child practice on his/her own.

Below is a list of additional questions to use when working with your child. These questions do not refer to any particular concept or topic. Some questions may or may not be appropriate for some problems.

- What have you tried? What steps did you take?
- What didn't work? Why didn't it work?
- What have you been doing in class or during this chapter that might be related to this problem?
- What does this word/phrase tell you?
- What do you know about this part of the problem?
- Explain what you know right now.
- What do you need to know to solve the problem?
- How did the members of your study team explain this problem in class?
- What important examples or ideas were highlighted by your teacher?
- Can you draw a diagram or sketch to help you?
- Which words are most important? Why?
- What is your guess/estimate/prediction?
- Is there a simpler, similar problem we can do first?
- How did you organize your information? Do you have a record of your work?
- Have you tried Guess and Check, making a list, looking for a pattern, etc.?

If your student has made a start at the problem, try these questions.

- What do you think comes next? Why?
- What is still left to be done?
- Is that the only possible answer?
- Is that answer reasonable?
- How could you check your work and your answer?
- How could your method work for other problems?

If you do not seem to be making any progress, you might try these questions.

- Let's look at your notebook, class notes, and Learning Log. Do you have them?
- Were you listening to your team members and teacher in class? What did they say?
- Did you use the class time working on the assignment? Show me what you did.
- Were the other members of your team having difficulty with this as well? Can you call your study partner or someone from your study team?

This is certainly not a complete list; you will probably come up with some of your own questions as you work through the problems with your child. Ask any question at all, even if it seems too simple to you.

To be successful in mathematics, students need to develop the ability to reason mathematically. To do so, students need to think about what they already know and then connect this knowledge to the new ideas they are learning. Many students are not used to the idea that what they learned yesterday or last week will be connected to today's lesson. Too often students do not have to do much thinking in school because they are usually just told what to do. When students understand that connecting prior learning to new ideas is a normal part of their education, they will be more successful in this mathematics course (and any other course, for that matter). The student's responsibilities for learning mathematics include the following:

- Actively contributing in whole class and study team work and discussions.
- Completing (or at least attempting) all assigned problems and turning in assignments in a timely manner.
- Checking and correcting problems on assignments (usually with their study partner or study team) based on answers and solutions provided in class.
- Studying the tutorial solutions to homework problems available at [www.hotmath.com](http://www.hotmath.com).
- Asking for help when needed from his or her study partner, study team, and/or teacher.
- Attempting to provide help when asked by other students.
- Taking notes and using his/her Learning Log when recommended by the teacher or the text.
- Keeping a well-organized notebook.
- Not distracting other students from the opportunity to learn.

Assisting your child to understand and accept these responsibilities will help him or her to be successful in this course, develop mathematical reasoning, and form habits that will help her/him become a life-long learner.

# Table of Contents

<b>Chapter 1 Investigations and Functions .....</b>	<b>1</b>
Investigations and Functions, 1.1.1 – 1.1.5	1
Investigating a Function, 1.2.1 – 1.2.2	6
SAT Prep	11
<b>Chapter 2 Sequences and Equivalence .....</b>	<b>13</b>
Sequences, 2.1.1 – 2.1.7	13
Equivalence, 2.2.1 – 2.2.6	19
Checkpoint Practice Problems	24
SAT Prep	26
<b>Chapter 3 Exponential Functions .....</b>	<b>29</b>
Exponential Functions, 3.1.1. – 3.1.6	29
Curve Fitting, 3.2.1 – 3.2.2	34
Checkpoint Practice Problems	38
SAT Prep	39
<b>Chapter 4 Transformations of Parent Graphs .....</b>	<b>43</b>
Transformations of $f(x) = x^2$ , 4.1.1 – 4.1.4	43
Transforming Parent Graphs, 4.2.1 and 4.2.4	48
Completing the Square, 4.3.1 and 4.3.2	53
Checkpoint Practice Problems	55
SAT Prep	57
<b>Chapter 5 Solving and Intersections .....</b>	<b>59</b>
Solving Systems of Equations, 5.1.1 – 5.1.4	59
Inequalities, 5.2.1 – 5.2.4	67
Checkpoint Practice Problems	73
SAT Prep	75

<b>Chapter 6 Inverses and Logarithms .....</b>	<b>77</b>
Inverses, 6.1.1 – 6.1.3	77
Logarithms, 6.2.1 – 6.2.5	81
Checkpoint Practice Problems	84
SAT Prep	85
<b>Chapter 7 3-D Graphing and Logarithms .....</b>	<b>87</b>
Systems of Three Equations, 7.1.1 – 7.1.5	87
Solving With Logarithms, 7.2.1 – 7.2.4	93
Matrices, 7.3.1 – 7.3.5	98
Checkpoint Practice Problems	102
SAT Prep	104
<b>Chapter 8 Trigonometric Functions .....</b>	<b>107</b>
Trigonometric Functions, 8.1.1 – 8.1.7	107
Transforming Trig Functions, 8.2.1 and 8.2.4	113
Checkpoint Practice Problems	119
SAT Prep	121
<b>Chapter 9 Polynomial Functions .....</b>	<b>123</b>
Polynomials, 9.1.1 – 9.1.3	123
Complex Numbers, 9.2.1 and 9.2.3	128
Factoring Polynomial Functions, 9.3.1 and 9.3.3	132
Checkpoint Practice Problems	137
SAT Prep	138
<b>Chapter 10 Probability and Counting.....</b>	<b>139</b>
Probability and Expectation, 10.1.1 – 10.1.2	139
Principles of Counting, 10.2.1 and 10.2.5	144
SAT Prep	148

<b>Chapter 11 Conic Sections.....</b>	<b>151</b>
Conic Sections	151
SAT Prep	156
<b>Chapter 12 Series .....</b>	<b>159</b>
Series, 12.1.1 – 12.1.4	159
Mathematical Induction, 12.2.1	163
Geometric Series, 12.3.1 and 12.3.3	165
Pascal’s Triangle, 12.4.1 and 12.4.2	169
SAT Prep	171
<b>Chapter 13 Analytic Trigonometry .....</b>	<b>173</b>
Analytic Trigonometry, 13.1.1 – 13.1.4	173
Trigonometric Identities, 13.2.1 – 13.2.3	177
SAT Prep	181
<b>Appendix Rational Expressions .....</b>	<b>183</b>
Part 1: Addition and Subtraction of Rational Expressions	183
Part 2: Multiplication and Division of Rational Expressions	185
Part 3: Solving Rational Equations	187
