Introduction to the Parent Guide

Welcome to the *Algebra Connections Parent Guide*. The purpose of this guide is to assist you should your child need help with homework or the ideas in the course. We believe all students can be successful in mathematics as long as they are willing to work and ask for help when they need it. We encourage you to contact your child's teacher if your student has additional questions that this guide or other resources do not answer. **Assistance with most homework problems is available at www.hotmath.com.**

This guide was written to address the major topics in each chapter of the textbook. Each section of the Parent Guide begins with a title bar and the section(s) of the book that it addresses. In many cases the explanation box at the beginning of the section refers you to one or more Math Notes boxes in the student text for additional information about the fundamentals of the idea. Detailed examples follow a summary of the concept or skill and include complete solutions. The examples are similar to the work your child has done in class. Additional problems, with answers, are provided for your child to practice.

There will be some topics that your child understands quickly and some concepts that may take longer to master. The big ideas of the course take time to learn. This means that students are not necessarily expected to master a concept when it is first introduced. When a topic is first introduced in the textbook, there will be several problems to do for practice. Subsequent lessons and homework assignments will continue to practice the concept or skill over weeks and months so that mastery will develop over time.

Practice and discussion are required to understand mathematics. When your child comes to you with a question about a homework problem, often you may simply need to ask your child to read the problem and then ask her/him what the problem is asking. Reading the problem aloud is often more effective than reading it silently. When you are working problems together, have your child talk about the problems. Then have your child practice on his/her own.

Below is a list of additional questions to use when working with your child. These questions do not refer to any particular concept or topic. Some questions may or may not be appropriate for some problems.

- What have you tried? What steps did you take?
- What didn't work? Why didn't it work?
- What have you been doing in class or during this chapter that might be related to this problem?
- What does this word/phrase tell you?
- What do you know about this part of the problem?
- Explain what you know right now.
- What do you need to know to solve the problem?
- How did the members of your study team explain this problem in class?
- What important examples or ideas were highlighted by your teacher?
- Can you draw a diagram or sketch to help you?
- Which words are most important? Why?
- What is your guess/estimate/prediction?
- Is there a simpler, similar problem we can do first?

- How did you organize your information? Do you have a record of your work?
- Have you tried Guess and Check, making a list, looking for a pattern, etc.?

If your student has made a start at the problem, try these questions.

- What do you think comes next? Why?
- What is still left to be done?
- Is that the only possible answer?
- Is that answer reasonable?
- How could you check your work and your answer?
- How could your method work for other problems?

If you do not seem to be making any progress, you might try these questions.

- Let's look at your notebook, class notes, and Learning Log. Do you have them?
- Were you listening to your team members and teacher in class? What did they say?
- Did you use the class time working on the assignment? Show me what you did.
- Were the other members of your team having difficulty with this as well? Can you call your study partner or someone from your study team?

This is certainly not a complete list; you will probably come up with some of your own questions as you work through the problems with your child. Ask any question at all, even if it seems too simple to you.

To be successful in mathematics, students need to develop the ability to reason mathematically. To do so, students need to think about what they already know and then connect this knowledge to the new ideas they are learning. Many students are not used to the idea that what they learned yesterday or last week will be connected to today's lesson. Too often students do not have to do much thinking in school because they are usually just told what to do. When students understand that connecting prior learning to new ideas is a normal part of their education, they will be more successful in this mathematics course (and any other course, for that matter). The student's responsibilities for learning mathematics include the following:

- Actively contributing in whole class and study team work and discussions.
- Completing (or at least attempting) all assigned problems and turning in assignments in a timely manner.
- Checking and correcting problems on assignments (usually with their study partner or study team) based on answers and solutions provided in class.
- Studying the tutorial solutions to homework problems available at www.hotmath.com.
- Asking for help when needed from his or her study partner, study team, and/or teacher.
- Attempting to provide help when asked by other students.
- Taking notes and using his/her Learning Log when recommended by the teacher or the text.
- Keeping a well-organized notebook.
- Not distracting other students from the opportunity to learn.

Assisting your child to understand and accept these responsibilities will help him or her to be successful in this course, develop mathematical reasoning, and form habits that will help her/him become a life-long learner.

Table of Contents

Chapter 1 Problem Solving.....	1
Interpreting Graphs	1
Solving Problems with Guess and Check	4
Chapter 2 Variables and Proportions.....	6
Variables and Combining Like Terms	6
Writing and Simplifying Algebraic Expressions	8
Solving Equations	10
Proportions	12
Chapter 3 Graphs and Equations.....	14
Graphs, Tables, and Rules	14
Examining and Using Equations	19
Chapter 4 Multiple Representations.....	22
Multiple Representations	22
Solving Linear Systems: The Equal Values Method	27
Chapter 5 Multiplication and Proportions.....	30
Using Rectangles to Multiply	30
Solving Equations with Multiplication	32
Solving Multi-Variable Equations	34
Setting Up Proportions	35
Solving Proportions	37
Chapter 6 Systems of Equations.....	39
Writing Equations	39
Solving Systems by Substitution	43
Elimination Method	46

Chapter 7 Linear Relationships.....	50
Slope—A Measure of Steepness	50
Writing an Equation Given the Slope and a Point on the Line	53
Writing the Equation of a Line Given Two Points	56
Chapter 8 Quadratics.....	58
Factoring Quadratics	58
Using the Zero Product Property	62
Using the Quadratic Formula	65
Chapter 9 Inequalities.....	70
Solving Inequalities	70
Graphing Inequalities	72
Systems of Inequalities	75
Chapter 10 Simplifying and Solving.....	78
Simplifying Expressions	78
Multiplication and Division of Rational Expressions	80
Solving by Rewriting: Fraction Busters	82
Multiple Methods for Solving Equations	84
Solving Absolute Value and Quadratic Inequalities	86
Solving by Completing the Square	88
Laws of Exponents	90
Chapter 11 Functions and Relations.....	93
Relations and Functions	93
Transformations of a Function	97
Intercepts and Intersections	99
Chapter 12 Algebraic Extensions.....	102
Factoring Shortcuts	102
Addition and Subtraction of Rational Expressions	104
Work and Mixture Problems	106
